                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ery Match.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a mosaic protein, comprising a plurality of homologous antigenic peptides from different genotypes of a species. The antigenic peptides are from nucleocapsid (NC) porteins. A method for synthesising an artificial gene that encodes the mosaic protein is also provided. The method is designated restriction endonuclease assisted ligation (REAL). The mosaic protein and the artificial mosaic protein are useful for detecting a hepatitis infection in an individual. The mosaic gene and protein is also useful for vaccination against infection, especially hepatitis C. The method of synthesizing the artificial gene and the resulting mosaic protein improve the sensitivity, spectrum of immunoreactivity, and antigen specificity of enzyme immunoassays. This provides improved detection of hepatitis C virus. The present sequence represents the amino acid sequence of the NS4 mosaic protein.

Use of NS3/4a conformational epitope in combination with MEFA, provides a sensitive and reliable method for detecting early HCV seroconversion. Use of MEFA has the added advantages of decreasing masking problems, improving sensitivity in detecting antibodies by allowing a greater number of epitopes on a unit surface area of substrate, and improving substrate. Detection accuracy is increased and the incidence of false results is reduced because of the identification and the use of highly immunogenic HCV antigens which are present during the early stages of HCV seroconversion. The present amino acid sequence represents the multiple epitope fusion antigen (MEFA) 7.1 of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diagnostic and prognostic tool to provide adequate patient care and to prevent transmission of HCV by blood and by blood products, or by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a new immunoassay solid supportions is the present ally of at least one hepatitis C virus (HCV) conformational epitope and a multiple epitope fusion antigen (1) bound to the support. The NS3/4a conformational epitope and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         15-JUN-2000; 2000US-212082P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 present in a biological sample from an HCV-infected individual. The immunoassays and methods of the invention are useful for detecting HCV infection in a biological sample. The inventive immunoassay solid support provides a sensitive and reliable method for detecting early HCV seroconversion. The assays can detect HCV infection caused by any six known genotypes of HCV. The use of the multiple epitope fusion proteins decreases masking problems, improves sensitivity in detecting antibodies by allowing a greater number of epitopes on a unit area of substrate, and improves selectivity. The present sequence represents HCV multiple epitope fusion antigen 7.1 (MERA 7.1), a mutant HCV polyprotein derived from various regions of HCV type 1, 2, or 3 (HCV-1, HCV-2, or HCV-3) polypeptide sequences.

It or its fragments may be used in a specific and accurate method for detecting KCHV antibodies in the serum of hepatitis C patients. Antibodies directed against these polypeptides are useful for the purification of KCHV antigens and for the development of an improved diagnostic to detect KHCV antigens in a sample. The polypeptides may also be used in a vaccine for treatment and prevention of KHCV infection at a dosage of 5-200 ug/peptide. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a partial Hepatitis C Virus (HCV) polyprotein from the non-structral region. Partial proteinase sequences (AAR82692-93) are contained within this sequence. The proteinases can be used as anti-HCV agents. They can also be used to screen cpds. for their ability to inhibit their proteolytic activity. In this way proteinase inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            04-DEC-1992;

Full-length clone and 14 shorter clones were isolated by PCR amplification. Primer/probes derived from the sequences of these clones c in diagnostic assays for HCV. See also AAQ40425-Q40439.

                                                         AAQ81559 encodes AAR68864 hepatitis C virus (HCV) RNA helicase. DNA was used in the construction of an expression vector, which was used to transform a baculovirus host. The transformed baculovirus could then be used for the recombinant prodn. of

                                             The sequence is encoded by the composite cDNA of AAN90327. Thes antigens react with antibodies in patients with non-A non-B hepa (NANBH). They can be used to diagnose HCV-induced MANBH, to rais antibodies for immunoassay or treatment, or to produce vaccines. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                             Hepatitis C virus gene - used for prodn. of polynucleotide polypeptide(s) and antibodies for diagnosis, prevention and of infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               B
                        The NS4 region from the 3' region of the PT-NANBH genome (AAQ46195) is amplified by PCR using primers D224 and D226 (AAQ46196-97) and the fragment (AAQ46198) is cloned into a vector and expressed in infected insect cells. The recombinant virus (BHC-19) was able to express the NS4 specific recombinant virus (BHC-19) was able to express the NS4 specific recombinant protein at low levels in the infected insect cells.

If at least three different PT-NANBH antigens are used to screen for PT-NANBH, the screening is much more sensitive as compared to the use of only two PT-NANBH antigens. Pref. antigens are described in AAQ46192-94. Two new antigenic regions of the PT-NANBH genome are given in AAQ46198-99. AAQ46202 describes an improved PT-NANBH recombinant polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention. The HCV gene is useful in the development of a diagnostic method which is more accurate and effective than conventional ones, in the detection of antibodies raised against a wide range of HCVs which have been hardly detected before. The complete gene may be used in an in vitro screening system for a substance capable of specifically superessing or controlling a proteolytic processing of a precursor polypeptide of HCV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the construction of an expression vector for the transformation of a host cell. The host cell can then be used in the production of proteins and peptides, useful in the preparation of monoclonal and polyclonal HCV-specific antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1853

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  virus. The polypeptide is an antigenic portion of the virus and will be useful in the development of vaccines for inducing immunity in man to PT-NANBH. The invention covers PT-NANBH viral polypeptides having an amino acid sequence at least 90 per cent homologous with the sequence given here, or antigenic fragments of such homologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequences.

The cDNA sequence was isolated using the primers given in AAQ63500-35. The amplified fragments are used in the detection of hepatitis virus. The target DNA was isolated from serum of chronically infected NANBH patients who were C100 antibody-positive and HCV RNA (NS5 region) positive. Reverse transcription-PCR and PCR were performed on cDNA and the total human NANBH DNA was constructed from 23 clones.

The proteinase is purified as a fused product with the dihydrofolate reductase protein by using a methotrexate column. It can be used for the development of an inhibitor for HCV
